

Dear Hiring Team at Blue Robotics,

I am writing to express my strong enthusiasm for the Engineering Internship position at Blue Robotics through the McGill Engineering Internship Program. As a Software Engineering student at McGill University with a strong foundation in microelectronic principles, circuit analysis, low-level embedded software, and hands-on hardware design, I am inspired by Blue Robotics' mission to make ocean exploration accessible through innovative, high-performance underwater systems.

My engineering mindset is driven by a deep impulse to understand how physical and digital systems interact, and to leverage that understanding to build practical technology. Through my academic coursework at McGill in computer engineering, signals, and electronic circuits, I have developed a solid grounding in electronic theory, component selection, and signal behavior. Complementing my studies, I enjoy bringing hardware projects to life: I have designed, built, and tested custom PCB layouts, and I regularly assemble and configure custom hardware environments, including building and maintaining my own server and NAS network infrastructure from the ground up.

In addition to hardware assembly and microelectronics, I bring strong low-level programming skills in C/C++, Python, and Linux systems administration. In my previous engineering work terms at the National Institute for Scientific Research (INRS) and the Ministry of Transportation, I regularly developed Python algorithms, processed complex data streams, and performed diagnostic troubleshooting under strict operational constraints. These experiences sharpened my ability to systematically debug hardware-software interactions, isolate system faults, and iterate quickly.

Blue Robotics' collaborative culture and commitment to enabling ocean exploration resonate deeply with me. I thrive in hands-on, multidisciplinary environments where curiosity, adaptability, and technical rigor intersect, and I am excited about the opportunity to contribute to your electronic design, PCB testing, and marine hardware initiatives.

Thank you for your time and consideration. I welcome the opportunity to discuss how my electronic foundation, embedded skills, and enthusiasm for marine technology align with your engineering team.

Sincerely,

Renji Jenkins
