

Dear Hiring Team at DP World,

I am writing to express my enthusiastic interest in the Engineering Co-op 8-month position at DP World's Vancouver Container Terminal. As a Software Engineering Co-op student at McGill University with a strong background in automated data retrieval, system process improvement, reliability analysis, and cross-functional project management, I am excited by the opportunity to contribute to DP World's maintenance, engineering, and port automation initiatives.

My technical and analytical skill set aligns directly with the maintenance and engineering team's focus on data-driven process optimization. During my research work at the National Institute for Scientific Research (INRS) and technical work at the Ministry of Transportation, I consistently engineered automated Python scripts to pull, aggregate, and analyze complex datasets, investigate system anomalies, and deliver clear engineering assessment reports. Whether developing automated workflows, conducting reliability studies, or reviewing technical compliance, I leverage strong programming capabilities (Python, C++, SQL) to replace manual data collection with efficient, repeatable automation.

In addition to technical data analysis, I bring solid project management and hands-on hardware/systems experience to support your engineering and maintenance superintendents, foremen, and external OEM suppliers. I hold the Google Project Management Certificate and regularly manage multi-step technical deliverables using structured tracking tools. Furthermore, my hands-on background in configuring custom server infrastructure (NAS), microelectronics, and virtualized systems gives me a practical understanding of equipment monitoring, system health, and infrastructure assessment.

Having worked across interdisciplinary research and public infrastructure environments, I thrive in fast-paced operational settings where clear communication, self-management, and safety standards are paramount. I am excited about the opportunity to bring my automation skills, engineering rigor, and proactive mindset to DP World Vancouver to help optimize terminal performance and trade flow.

Thank you for your time and consideration. I welcome the opportunity to discuss how my engineering background and data automation skills align with your team's goals.

Sincerely,

Renji Jenkins
