

Dear Hiring Manager,

I am currently studying Software Engineering at McGill University, and I am writing to apply for a Software Engineering Internship at Famic Technologies. It was a pleasure speaking with your team at the McGill TechFair, where learning more about Famic's work in industrial automation and simulation software, especially platforms like Automation Studio, reinforced my strong interest in joining your engineering team.

Throughout my studies at McGill, my primary focus has been building a solid foundation in object-oriented programming, systems design, and data structures. I work comfortably across C++, Java, and Python, with a focus on writing clean, modular code that is easy to test and maintain. Whether I'm building automated testing pipelines, debugging tricky application logic, or designing software architecture for class projects, I genuinely enjoy tackling complex technical problems and seeing them through to execution.

Following our conversation at TechFair, I am even more excited about the prospect of interning at Famic and contributing directly to software that engineers and technicians rely on globally. I thrive in hands-on environments where I can learn from experienced developers, contribute to core simulation systems, and help build software that solves tangible engineering problems.

Thank you for taking the time to review my application. I would welcome the opportunity to speak further about how my software background and enthusiasm for simulation design fit into your team this term.

Sincerely,

Renji Jenkins
