

Dear Hiring Team,

I am writing to express my strong interest in the Software Engineering Intern position at Flare. As a Software Engineering Co-op student at McGill University based in Montreal, I am deeply drawn to Flare's mission of empowering organizations against cyber threats and financial crimes through proactive threat intelligence. The opportunity to work on concrete, high-impact features alongside a team that blends software engineering, cybersecurity, and data analysis is extremely compelling.

My technical experience aligns directly with Flare's development ecosystem and product objectives:

- **Python & Database Engineering:** I build backend services and APIs using Python (FastAPI/Flask) paired with PostgreSQL databases. Through my computer vision and NLP project, *FoodLens*, I engineered robust data-processing pipelines, structured database schemas, and optimized queries for efficient data retrieval.
- **Linux, Networking & Infrastructure:** I bring strong hands-on experience in Linux/Unix system administration, network security, and infrastructure management. I self-host applications on my personal server using Docker containers, Nginx reverse proxy routing, and TLS/SSL certificate management, while utilizing Git and Kubernetes for container orchestration and deployment workflows.
- **Algorithmic Data Analysis & Research Rigor:** During my research term at INRS, I developed automated data-processing algorithms to collect, clean, and analyze high-dimensional datasets. This analytical rigor transfers directly to collecting, processing, and analyzing data related to cyber criminality and threat signals.
- **Growth Mindset & Local Collaboration:** Based in Montreal, I thrive in collaborative, fast-paced environments where quick adaptation, autonomous problem-solving, and continuous learning are key.

I am eager to contribute clean code, proactive problem-solving, and a strong interest in cybersecurity to Flare's development team.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my technical skills can support Flare's mission in an interview.

Sincerely,

Renji Jenkins
