

Dear Hiring Team at Genetec,

I am writing to express my strong enthusiasm for the **Software Developer Intern** position at Genetec. As a Software Engineering Co-op student at McGill University with hands-on experience in full-stack web development, C++/Python systems programming, and Linux server administration, I am eager to contribute to Genetec's innovative security solutions. Having recently attended Genetec's information session, I was particularly impressed by your commitment to continuous learning and the specialized technical training courses offered during the internship program, which make Genetec an ideal environment for my growth as a developer.

Through my academic coursework and software projects, I have built a versatile technical stack spanning C++, Python, Java, JavaScript/React, and SQL databases. I have practical experience building web platforms using backend frameworks like Django, as well as setting up local Linux server infrastructure (NAS) and configuring secure network protocols. In my research work at the National Institute for Scientific Research (INRS) and technical role at the Ministry of Transportation, I consistently engineered performant algorithms, processed complex data streams, and applied clean object-oriented architecture to deliver well-documented software solutions.

Working within Agile/Kanban development environments (with Trello), I thrive on tackling challenging engineering problems, reviewing system behavior, and optimizing code quality before deployment. I am comfortable collaborating across multidisciplinary teams to design new features while maintaining the autonomy needed to troubleshoot complex defects independently.

Genetec's leadership in cloud-based physical security, along with its vibrant, collaborative culture, makes this opportunity deeply exciting to me. I am eager to bring my software engineering skills, proactive mindset, and passion for learning to your development team.

Thank you for your time and consideration. I welcome the opportunity to discuss how my software development background and technical experience align with Genetec's goals.

Sincerely,

Renji Jenkins
