

Dear Hiring Team at the Canadian Space Agency, / Madame, Monsieur,

I am writing to express my strong enthusiasm for the IT Enterprise Architecture Internship within the IM IT Directorate at the Canadian Space Agency (CSA) in Longueuil for the Winter 2027 term. As a fully bilingual Software Engineering Co-op student at McGill University with hands-on experience in IT infrastructure administration, system architecture modeling, process optimization, and OBNL financial/administrative management, I am eager to support CSA's digital transformation initiatives.

My technical and analytical background sits at the intersection of enterprise software, IT infrastructure, and organizational process design. On the IT architecture side, I design and manage centralized Linux server environments (Synology NAS), where I configure reverse proxies, containerized services (Docker), virtualized networks, and security protocols (TLS/SSL, local DNS). Complementing this IT foundation, my formal training in accounting (AEC) and experience managing end-to-end administration and budgeting for OBNLs have sharpened my ability to analyze organizational workflows, clean and structure data in Excel and SQL, and map complex business processes into clear, maintainable architecture models.

Throughout my software engineering coursework and previous work terms at the National Institute for Scientific Research (INRS) and the Ministry of Transportation (MTMD), I have consistently acted as a bridge between technical platforms and end-user needs. Whether conducting requirement discovery, building analytical reports, or presenting system designs to interdisciplinary teams, I focus on delivering user-oriented solutions that improve operational efficiency. Being fluently bilingual in French and English, I communicate complex technical concepts effectively across diverse stakeholders through written reports, executive presentations, and collaborative workshops.

The opportunity to combine my IT architecture skills, analytical thinking, and passion for technology to foster digital transformation at the Canadian Space Agency is deeply inspiring. I am fully available to work on site four days per week at the Longueuil facility and contribute to the IM IT Directorate's goals.

Thank you for your time and consideration. I welcome the opportunity to discuss how my background in enterprise systems, analytical modeling, and bilingual communication aligns with your team's objectives.

Sincerely / Chaleureusement,

Renji Jenkins
