

Dear Martin Tzakov and Members of the AI Committee,

I am writing to express my enthusiastic interest in the AI Systems & Investment Tech Intern position at Pembroke Management Ltd. As a Software Engineering Co-op student at McGill University with a strong foundation in machine learning, database engineering, and full-stack dashboard development, complemented by formal accounting credentials (AEC) and an active focus on investment analysis, I am eager to help Pembroke transition its AI tools from prototype to robust, documented, production systems.

My background sits directly at the intersection of software engineering, operational automation, and financial analysis. On the technical side, I build custom Python automation pipelines, engineer database schemas in SQL, and develop interactive web tools (React, Django) to visualize complex datasets. In my machine learning work, I regularly build custom neural networks and integrate Large Language Models (LLMs) and APIs into functional workflows. Complementing this technical stack, my training in accounting and personal management of investment portfolios give me an intuitive understanding of investment research, financial reporting, and market analytics, enabling me to communicate seamlessly with portfolio managers and technology staff alike.

During my previous engineering work terms at the National Institute for Scientific Research (INRS) and the Ministry of Transportation, I specialized in taking raw prototypes, automating data extractions, and turning them into reliable, clean, and fully documented software tools. Whether cleaning and structure-loading financial datasets into SQL databases, building automated LLM workflows to streamline research, or standardizing internal tools so they are easily maintained across teams, I focus on delivering clean code, rigorous testing, and clear system documentation.

Pembroke's commitment to employee ownership, long-term growth, and practical innovation deeply resonates with me. I am excited about the opportunity to work in-person at your Montreal office and make an immediate impact on Pembroke's internal research and analytics capabilities.

Thank you for your time and consideration. I welcome the opportunity to discuss how my software engineering, financial literacy, and AI automation skills align with the AI Committee's goals.

Sincerely,

Renji Jenkins
