

Dear Hiring Team,

I am writing to express my strong enthusiasm for the Programmer Intern at Epic Games. As a Software Engineering Co-op student at McGill University with a solid background in C++ programming, Linux systems administration, and custom developer tooling, I am eager to contribute to Epic's high-performance engine frameworks and core development pipelines.

My technical foundation centers on low-level systems engineering, memory management, and modern C++ development. Through my academic coursework at McGill and self-directed engineering projects such as configuring Linux server infrastructure (on my home NAS) and building custom data processing applications, I have developed a deep appreciation for write-efficient, scalable architecture and performance optimization. Complementing my core software development skills, I regularly utilize Python, Git, and automated scripts to streamline developer workflows and resolve complex debugging challenges.

These technical capabilities base is reinforced by my engineering experience in research and public sector environments. During my work term at the National Institute for Scientific Research (INRS), I engineered automated algorithms to extract pattern intelligence from large-scale geospatial datasets, emphasizing clean object-oriented design and rigorous testing. In addition, my technical role at the Ministry of Transportation sharpened my ability to diagnose system behavior, analyze constraints, and deliver well-documented solutions under strict project requirements.

Having completed prior engineering work terms, I thrive in fast-paced, collaborative environments where code quality, performance optimization, and technical precision are paramount. Epic's dedication to empowering developers and pushing the boundaries of real-time interactive technology makes this opportunity deeply inspiring to me.

Thank you for your time and consideration. I welcome the opportunity to discuss how my C++ systems background, scripting capabilities, and engineering experience align with your team's goals.

Sincerely,

Renji Jenkins
