

Dear Hiring Team,

I am writing to express my strong enthusiasm for the Technology, Operations & Cyber Security Analyst student opportunity at RBC for the Winter 2027 term. As a Software Engineering Co-op student at McGill University with hands-on experience in software development, data systems, and public sector research, I am eager to leverage my technical skill set to support RBC's technology infrastructure and cybersecurity initiatives.

Through my academic background in Software Engineering and practical research experience at the National Institute for Scientific Research (INRS), I have cultivated robust skills in algorithm development, data analysis, and systems management using C#, Python and SQL environments. My work in research and government roles at the Ministry of Transportation required high-level problem-solving, meticulous attention to detail, and a rigorous approach to data integrity which are qualities that directly align with the demands of monitoring, analyzing, and securing critical operational systems at RBC.

In addition to my technical base, my leadership roles such as founding an academic competitions committee and managing organizational finances have honed my analytical reasoning, communication, and project coordination abilities. I thrive in dynamic, fast-paced environments and bring a proactive mindset toward learning new security frameworks, automation tools, and operational workflows.

RBC's commitment to technological innovation and robust security infrastructure makes this opportunity deeply compelling to me. I am confident that my background in software engineering, combined with my strong work ethic and adaptability, will allow me to make immediate contributions to your team.

Thank you for your time and consideration. I welcome the opportunity to discuss how my background and skills align with RBC's technology and cybersecurity goals.

Sincerely,

Renji Jenkins
