

Dear Hiring Team,

I am writing to express my strong enthusiasm for the Software Developer Co-op/Intern position for the Winter term in Ottawa. As a Software Engineering Co-op student at McGill University with hands-on experience in full-stack software development, containerized environments, and Linux system administration, I am eager to contribute to the design, implementation, and automated testing of your NSP platform features.

Throughout my academic coursework and engineering roles, I have cultivated a strong foundation in modern software development methodologies, object-oriented design, and clean coding best practices. My technical stack includes proficiency in languages such as Java, Python, C++, C#, and JavaScript/React, as well as relational database systems. In my research work at the National Institute for Scientific Research (INRS) and engineering role at the Ministry of Transportation, I consistently analyzed requirements, engineered robust algorithms, prepared technical documentation, and executed unit/integration tests to ensure high-quality software before deployment.

In addition to core application development, I bring practical experience with Linux environments, DevOps pipelines, and security infrastructure. I regularly configure Linux servers (with my NAS), manage containerized applications using Docker, and configure secure local networks using TLS/SSL certificates and authentication protocols. My workflow is grounded in modern CI/CD tools including Git, GitLab to maintain clean, fully documented, and testable code bases.

Having completed prior engineering work terms in research and government settings, I am accustomed to working with minimal supervision, troubleshooting complex defects, and thriving in collaborative team environments. I am excited about the opportunity to apply my software engineering background, containerization knowledge, and proactive problem-solving to support Nokia's NSP platform.

Thank you for your time and consideration. I welcome the opportunity to discuss how my software development, Linux administration, and engineering background align with your team's goals.

Sincerely,

Renji Jenkins
