

Dear Hiring Team at PCL Construction,

I am writing to express my strong interest in the Technology Student co-op position for the Winter 2027 term at PCL Construction's Montreal district. As a Software Engineering Co-op student at McGill University with extensive hands-on experience in computer hardware, operating system deployment, networking, and IT technical support, I am eager to contribute to PCL's IT infrastructure and support operations across office and job-site environments.

My background aligns directly with the core technical responsibilities of this role:

- **Workstation & OS Management:** I have extensive experience installing, configuring, and deploying Windows and Linux operating systems, managing user permissions, and troubleshooting hardware and software compatibility issues.
- **IT Support & Dépannage Techniques (Troubleshooting):** Through maintaining my own network servers and home laboratory infrastructure, I have developed strong diagnostic and hardware troubleshooting skills, ranging from network cabling and AV setup to hardware component inspection and OS reimaging.
- **Hardware Inventory & Field Readiness:** I am highly organized and accustomed to structured equipment tracking, inventory auditing, and physically setting up hardware components for seamless operational readiness.
- **Communication & Collaboration:** Having mentored robotics teams and collaborated across multi-disciplinary engineering projects, I prioritize clear, approachable technical communication to assist end-users and ensure seamless conference room AV operations.

I am enthusiastic about PCL's culture of mentorship and hands-on learning, and I look forward to bringing a proactive work ethic, technical adaptability, and strong problem-solving skills to your Montreal team.

Thank you for your time and consideration.

Sincerely,

**Renji Jenkins**
