

Dear Hiring Team,

I am writing to express my strong enthusiasm for the Test Automation Co-op/Intern position for the Winter 2027 term in Ottawa. As a Software Engineering Co-op student at McGill University with hands-on experience in Python development, DevOps workflows, and Linux environment administration, I am eager to contribute to Nokia's test automation and network automation initiatives.

Throughout my academic coursework and engineering roles, I have built a solid foundation in programming (Python, C++, C#, Java) and automation tool development. In my research work at the National Institute for Scientific Research (INRS) and technical role at the Ministry of Transportation, I regularly developed Python scripts to automate data pipelines, investigate system anomalies, and validate complex datasets across multiple platforms. These experiences refined my issue-investigation skills and my ability to build repeatable automation tools.

In addition to software development, I bring practical experience with Linux/UNIX environments and DevOps practices. I regularly configure Linux server infrastructure (NAS), work with containerized applications, write automated scripts, and manage dependencies using modern development tools including Git and NPM. Through my self-directed learning such as completing specialized neural network courses and building personal software projects, I have demonstrated a strong motivation to explore and integrate new technologies continuously.

Having completed prior engineering work terms in government and research settings, I thrive in fast-paced environments where adaptability, technical precision, and continuous learning are essential. I am excited about the prospect of bringing my Python development, DevOps toolchain experience, and problem-solving mindset to your team to enhance network automation capabilities.

Thank you for your time and consideration. I welcome the opportunity to discuss how my software engineering background and automation skills align with your team's goals.

Sincerely,

Renji Jenkins
