

Dear Hiring Team,

I am writing to express my strong enthusiasm for the Tools and Automation SW Dev Co-op/Intern position for the Winter 2027 term in Ottawa. As a Software Engineering Co-op student at McGill University with hands-on experience in full-stack web development, Python automation, and Linux systems administration, I am eager to contribute to your internal tools and cloud-native frameworks.

Through my academic coursework and personal software projects, I have developed a versatile programming stack that aligns directly with your requirements. I am proficient in Python, C#, React, JavaScript, HTML5/CSS3, and SQL databases, with direct experience building web applications using backend frameworks like Django. My experience designing interactive dashboards and processing data pipelines developed through research at the National Institute for Scientific Research (INRS) and engineering work at the Ministry of Transportation has given me a solid grasp of object-oriented design, algorithm optimization, and data structures.

In addition to application development, I bring strong Linux environment expertise. I regularly configure Linux servers (through a home NAS) with Docker, manage containerized workloads, write custom Bash/Shell and Python scripts to automate routine tasks, and maintain database infrastructure. Having managed financial systems and led multidisciplinary student initiatives, I thrive in Agile team environments where active communication, prototyping, and continuous improvement are key.

Having completed prior engineering work terms, I am accustomed to investigating system performance constraints, reviewing code, and quickly learning new automation tools. I am excited about the prospect of applying my full-stack and scripting capabilities to enhance your internal frameworks and explore cloud technologies like Docker and Kubernetes.

Thank you for your time and consideration. I welcome the opportunity to discuss how my web development, Python automation, and engineering background align with your team's goals.

Sincerely,

Renji Jenkins
