

Dear Hiring Team at Transport Canada,

I am writing to express my strong enthusiasm for the **Engineering Co-op Student** position within the Strategy and Emerging Technologies (SET) Branch at Transport Canada for the Winter 2027 term. As a Software Engineering Co-op student at McGill University with prior provincial transportation sector experience, technical data analysis capabilities, and formal project management training, I am eager to support your multidisciplinary team in advancing technical standards, safety assurances, and regulations for Remotely Piloted Aircraft Systems (RPAS) and Commercial Space Launch (CSL) operations.

My background combines engineering rigor with structured public sector familiarity. During my work term at the Ministère des Transports et de la Mobilité durable (MTMD), I gained hands-on experience navigating government workflows, reviewing technical documentation, and maintaining organized deliverables within public administration frameworks. Furthermore, during my research work at the National Institute for Scientific Research (INRS), I developed automated Python scripts to conduct literature extractions, process complex datasets, and perform quantitative data analysis. These experiences align directly with the SET Branch's needs for RPAS engineering research, data synthesis, and technical compliance reviews.

To complement my analytical skills, I hold the Google Project Management Certificate and regularly utilize project tracking tools like Trello to organize deliverables, draft technical minutes, and monitor milestones. Combined with my leadership experience coordinating multidisciplinary student initiatives, I bring clear written and oral communication skills, preparing me to actively engage with industry working groups, assist in drafting advisory materials, and support international stakeholder discussions.

I am excited about the prospect of bringing my software engineering background, analytical mindset, and project organization skills to Transport Canada to support the safe integration of drones and commercial space launch in Canada.

Thank you for your time and consideration. I welcome the opportunity to discuss how my technical skills and public sector background align with the SET Branch's goals.

Sincerely,

Renji Jenkins
